

FOR PRESSURE WASHING OF SPORTS FIELD SURFACES

FOR PRESSURE WASHING OF SPORTS FIELD SURFACES

ALPHA CLEANER is a concentrated cleaner made for acrylic coatings and is specially formulated to remove environmental pollution, moss, fungi and mildew, dust and filth on the acrylic coatings of sports surfaces such as tennis, basketball, badminton, etc. This powerful **ALPHA CLEANER** formula has been developed expressly for the cleaning of acrylic coatings with pressure washers. It contains a lime descaler, which quickly becomes biodegradable and contains an anti-foaming agent which makes it ideal for pressure washing machines without any excessive foaming. There are no manual applications required with this powerful cleaning solution.

Safe for acrylic coatings, it is also non-toxic and biodegradable and also safe for the pressure washers themselves. This cleaning solution is not harmful to plants, trees, shrubs or turf. It is also safe for use in areas frequented by children, animals and wildlife (*make sure to water the lawn and plants quite well after cleaning with **ALPHA CLEANER**, which also rinses the cleaning solution away*).

The application of the cleaning solution from concentrate is perfect for use on coloured acrylic coatings. Check the label on the product for specific applications as well as the dilution guidelines.

ALPHA CLEANER is a powerful professional ecological cleaning product recommended for the periodic maintenance of acrylic coating surfaces that are heavily soiled. **ALPHA CLEANER** is completely biodegradable and does not contain chlorine or other halogens, nor petroleum-based detergents and inorganic acids. All detergents used for the manufacture of **ALPHA CLEANER** are of plant origin.
